## **DETAILED ACTION**

This Office Action is in response to the remarks filed January 2, 2003.

### ***Priority***

Acknowledgment is made of filed certified copy of foreign application filed in Taiwan on May 29, 2001.

### ***Drawings***

The objection to the drawings has been withdrawn due to the amendment filed.

### ***Specification***

The objection to the specification has been withdrawn due to the amendment filed.

### ***Claim Objections***

The objection to claim 12 has been withdrawn due to the amendment filed.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a

Art Unit: 2822

person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over  
Prior Art Figures 1-2 in view of .Lee et al. (US 6,173,490 B1)

Prior Art Figures 1-2 teach a semiconductor package, comprising: a substrate **10** mounted with at least one semiconductor chip **12**; thereon and electrically connected to the semiconductor chip; an encapsulant **19** formed by a molding compound injected into a molding cavity of a mold for encapsulating the semiconductor chip mounted on the substrate; a BGA (ball grid array) semiconductor package; a FCBGA (flip chip ball grid array) semiconductor package; a molding compound of an epoxy resin having low viscosity, high fluidity and small fine filler size; air vents **17**; and a molded underfilling technique being employed for injecting the molding compound. However, Prior Art Figures 1-2 fail to teach a molding cavity formed with a plurality of recess portions, which are dimensioned to be relatively smaller in height than the molding cavity. Lee et al. teach a molding cavity formed with a plurality of recess portions, which are dimensioned to be relatively smaller in height than the molding cavity and vents **290** (Figures 3-4B, col. 5, lines 11-36, abstract). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the structure of Prior Art Figure 1-2 with the molding cavity formed with a plurality of recess portions of Lee et al. to improve packaging efficiency.

***Response to Arguments***

Applicant's arguments filed January 2, 2003 have been fully considered but they are not persuasive.

It is within the level of ordinary skill to substitute gas for air since air is a form of gas.

***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
